CORDLESS UNITYCEL·20

(20.0V PLATFORM)

Ever since the creation of **CORDLESS TOOLS**, many makers are always looking to create a **POWER PLATFORM** that can accommodate multiple tools allowing buyers/users the **FLEXIBILITY** of using the same **POWER SOURCE** on their growing list of tools.

Like **EV (Electric Vehicle)** makers striving to improve on the duration of the battery usage, the Li-Ion technology for **CORDLESS TOOLS** would be a common sight in most hardware & machinery shops and **@** QUASA, we strive to bring you a complete range of **DC TOOLS** ideal for Contractors and DIY use powered by a single **POWER SOURCE**. Most importantly allowing Contractors an **affordable range of tools fit for professional use BUT close to DIY Price**.

Our **UNITYCEL·20 SERIES** platform enable a flexible one-for-all integrated solution to all the prospective **CORDLESS TOOLS** within our range. This range will truly enable users the mobility of their units without hassle of the wire.

ADVANTAGE POINTS

- **Power Platform is becoming a part of global retail strategy;**
- **Strong platform will create user loyalty;**
- **Battery + Charger platform is eventually seen as independent from products maker creating a competitive environment;**
- **Power Platform will drive makers into specialization resulting in more tools, more usage;**
- **Game Changer;**

WHERE ARE WE HEADING

- **UNITYCEL·20 SERIES creates an environment for products expansion;**
- **Requirement of higher voltage & more demanding job requiring a flexible platform that can be expanded without switching platform;**
- **Each product has its own Electronic "Sweet Spot' thereby the electronics are now attached to the unit(s) and/or charger rather than the battery;**
- **Impossible to have a single battery design suit all products, even if its possible impact on costs will be very significant;**
- **One for all charger simplified;**
- **Endless possibilities and loyalty is created;**
